

City Council Report Aug 4th 26

1. We have been doing a lot of weed control.
2. Started dura patching potholes around town.
3. Paving company will be here this month to pave patch holes around town.
4. We had a couple of entities come to our wastewater plant to evaluate equipment for wastewater project.
5. Contractors are scheduled to come back Aug 13th for the storm water project.
6. New playground equipment has been completed at the pool park, new install on playground equipment at ballfields will begin this week.
7. NWE will begin trimming trees from their streetlight wires, they will be putting trimmings in the boulevard, and the city will be chipping them.
8. I have received questions about our water and wastewater plants online security. Our tech company for Scada and remote controls M.E.T. is based out of Helena. We must manually adjust chemicals at the water plant, so there is no chemical control to be compromised online. If a hack were to occur, we have the ability to A. drop the control system and reboot the program closing any backdoors they might of left and B. run the plant manually if system does need to be dropped.
9. I have been working with Verkada looking at cameras around the pool area. They have sent out a trial camera to see if it meets our needs.
